
VIBE96 QUALITY REPORT

UpTech Fashion E-Commerce

Multilingual clothing e-commerce store with admin panel, wholesale pricing and landing-page orders, for fashion brands.

Product ID	**B0408-75552**
Builder	**Uptechture Soft**
Version reviewed	**1.0.0 · released 4 Nov 2026**
Stack	**Angular 22 (standalone components, signals, zoneless) for the storefront and admin SPA; the API is PHP with no framework · PHP 8.1+ (API) and TypeScript (Angular 22 frontend) · MySQL 5.7+ or MariaDB 10.3+ (utf8mb4)**
Built with	**Claude Code**
Review period	**25 Oct 2026 – 4 Nov 2026 · 2 rounds of changes**

80 / 100

Passed with 4 warnings

Pass mark 75 and no failing check.

At a glance

✓ Installed and run from the delivered code — 8 of 8 checks answered yes.

✓ Live demo compared with the delivered code — 7 of 7 checks answered yes.

! 11 of 15 promised items delivered (setup guide, example config and the rest).

✓ Security scored 77/100 with no failing check.

! 4 open warnings — explained in part 1.

Check this report is genuine. Scan the code or open vibe96.com/report/QR-26-00086. The online copy always shows the latest status.

PART 1

AI code audit

The full source archive was read by our AI auditor against each check. It reads the code — it does not run it; running it is part 2.

CHECK	WHAT WE FOUND	SCORE	RESULT
Secrets & credentials	The regex hits are mostly form fields, password variables and docker-compose placeholders that require .env values; none is a live credential. The shipped demo logins (admin and customer) are hard-coded in the frontend, README and seed data, so a buyer who forgets to change them leaves a known admin password in production.	88	Warning
Dependency vulnerabilities	The only manifest visible is a project file, and package-lock.json is committed (200 KB). Dependencies are limited to Angular, rxjs and tslib with caret ranges, and nothing wildcard or abandoned. The PHP API is framework-free with no composer dependencies. The lockfile contents were not shown, so specific installed versions could not be checked against advisories.	88	Pass
Authorisation & access control	Passwords are bcrypt-hashed, login and registration are rate limited, and the admin password change and upload endpoints sit behind admin guards. The route table (routes.php), the admin controllers and the guard enforcement in Auth.php were truncated from the digest. The per-route guards and ownership checks therefore could not be verified. The shipped demo credentials and the account-linking logic in register() are real concerns.	72	Warning
Database access rules	The visible controllers (customer and admin AuthController) use prepared statements via Db::one/Db::run/Db::update with bound parameters, and scoped UPDATE/WHERE clauses. However schema.sql, OrderService, ProductQuery, ReportController and CrudController were not included in the excerpt, so injection paths, foreign keys and indexes could not be verified.	72	Warning
Code structure & duplication	The project has a clear layering (Core, Services, Controllers, Admin/Shop/Account splits, a shared frontend folder), which a buyer can navigate. The main weaknesses are a few large files and repeated patterns across admin controllers and API client calls, which are maintainability costs rather than defects.	84	Pass
Build reproducibility	The archive has a committed lockfile, a pinned Angular toolchain, a docker-compose with required env checks, and a deploy packager, so a clean build looks plausible. However, HowToSetup.md, the Dockerfile and compose contents were not in the excerpts, so prerequisite versions and step order could not be confirmed. Some inconsistencies and gaps remain.	78	Warning

Open warnings

Problems that did not stop the listing. They stay on the product page until a later version fixes them.

Warning 1 **No real credentials found; demo admin/customer passwords are hard-coded and documented as defaults**

The regex hits are mostly form fields, password variables and docker-compose placeholders that require .env values; none is a live credential. The shipped demo logins (admin and customer) are hard-coded in the frontend, README and seed data, so a buyer who forgets to change them leaves a known admin password in production.

Warning 2 **Auth model looks sound, but routes.php was not visible and the demo credentials are exposed**

Passwords are bcrypt-hashed, login and registration are rate limited, and the admin password change and upload endpoints sit behind admin guards. The route table (routes.php), the admin controllers and the guard enforcement in Auth.php were truncated from the digest. The per-route guards and ownership checks therefore could not be verified. The shipped demo credentials and the account-linking logic in register() are real concerns.

Warning 3 **Parameterized queries seen in sampled code; schema and most SQL files were not visible, so score is capped**

The visible controllers (customer and admin AuthController) use prepared statements via Db::one/Db::run/Db::update with bound parameters, and scoped UPDATE/WHERE clauses. However schema.sql, OrderService, ProductQuery, ReportController and CrudController were not included in the excerpt, so injection paths, foreign keys and indexes could not be verified.

Warning 4 **Mostly reproducible; HowToSetup.md and several referenced files could not be verified, and there are no tests**

The archive has a committed lockfile, a pinned Angular toolchain, a docker-compose with required env checks, and a deploy packager, so a clean build looks plausible. However, HowToSetup.md, the Dockerfile and compose contents were not in the excerpts, so prerequisite versions and step order could not be confirmed. Some inconsistencies and gaps remain.

Requirement list

What the builder agreed to deliver before uploading — 11 of 15 met.

✓	Complete source for every component	Met
✓	No real credentials in the archive	Met
!	Builds from a clean machine	Partial
✓	Database script or migrations	Met
!	Authentication and roles on every mutating endpoint	Partial
!	Pinned dependencies without critical CVEs (nice)	Partial
✓	Documentation set (nice)	Met
!	Working live demo	Partial
✓	README.md	Met
✓	HowToSetup.md	Met
✓	CLAUDE.md (or AGENTS.md) (nice)	Met
✓	CHANGELOG.md (nice)	Met
✓	.env.example	Met
✓	a project file	Met
✓	a project file (nice)	Met

PART 2

Human review

Reviewers from the Vibe96 team in Dubai worked through each question below; a final reviewer signed it off.

Stage 1 — Installed and run from the delivered code

Completed 2 Nov 2026

A reviewer installed the product on a clean machine, following only the guide that ships with it.

QUESTION	ANSWER	REVIEWER'S NOTE
Packages restored without errors	Yes	
Solution builds clean	Yes	
Database created from the shipped script or migrations	Yes	
First sign-in works with the documented steps	Yes	
Setup guide is accurate and complete	Yes	
Every module in the feature list opens and works	Yes	
No real secrets in the archive	Yes	
Branding and company details can be changed without code	Yes	

Stage 2 — Live demo compared with the delivered code

Completed 2 Nov 2026

A second reviewer checked that what the listing and demo show is what the buyer receives.

QUESTION	ANSWER	REVIEWER'S NOTE
Demo URL is reachable	Yes	
Demo credentials work	Yes	
Demo runs the same version as the archive	Yes	
All five differentiators are visible in the demo	Yes	
Screenshots match the demo	Yes	
Nothing in the demo is missing from the code	Yes	
Datasheet claims are accurate	Yes	

Changes asked for during review

None — approved on the first round.

Sign-off: approved for sale on 4 Nov 2026 with 4 warnings shown publicly.

What this report covers — and what it doesn't

- **It covers** version 1.0.0 exactly as the buyer downloads it: the source archive, the setup guide and the live demo on the dates above.

- **It is not** a penetration test, a performance or load test, or a legal review of third-party package licences.
- **Scores are a point in time.** Libraries age; a later version is audited again and gets its own report.
- **Your setup matters.** Hosting, configuration and changes made after purchase are outside this review.
- **How the score is made:** each AI check is scored 0–100 and weighted (security counts most). A listing needs 75 or more, no failing check, and the human review passed.
- **Always try the live demo** before buying, and ask the builder questions from the product page.
