
VIBE96 QUALITY REPORT

RestoSaaS: Restaurant Reservations with an AI Host

restaurant reservation SaaS with AI phone host, host stand, waitlist and Stripe plans, for operators or resellers.

Product ID	**B0148-33410**
Builder	**AHMAD**
Version reviewed	**1.0.0 · released 4 Nov 2026**
Stack	**Laravel 12 (12.70) with Livewire 4, Alpine.js and Tailwind CSS · PHP 8.4 · MySQL 8 / MariaDB 10.6+**
Built with	**Claude Code**
Review period	**28 Oct 2026 – 4 Nov 2026 · 1 round of changes**

81 / 100

Passed with 4 warnings

Pass mark 75 and no failing check.

At a glance

! Installed and run from the delivered code — 5 of 6 checks answered yes.

✓ Live demo compared with the delivered code — 7 of 7 checks answered yes.

! 18 of 26 promised items delivered (setup guide, example config and the rest).

✓ Security scored 79/100 with no failing check.

! 4 open warnings — explained in part 1.

Check this report is genuine. Scan the code or open vibe96.com/report/QR-26-00092. The online copy always shows the latest status.

PART 1

AI code audit

The full source archive was read by our AI auditor against each check. It reads the code — it does not run it; running it is part 2.

CHECK	WHAT WE FOUND	SCORE	RESULT
Secrets & credentials	Every regex hit is a placeholder, an env-var reference, or ordinary code (validation rules, config reads, token generators). The one blemish is .env.example, which ships what look like real Stripe price IDs from the builder's own account, plus APP_DEBUG=true and an empty DB password as defaults.	**92**	Warning
Dependency vulnerabilities	Both composer.lock and package-lock.json are committed, and the README reports clean `composer audit --locked` and `npm audit` runs. Ranges are caret-bound with no wildcards or pre-release builds. The remaining issues are small: build tooling placed in devDependencies, a Tailwind/plugin mismatch, and the audit claims could not be independently verified from the digest.	**88**	Pass
Authorisation & access control	The visible parts are well built: Breeze auth routes are correctly guarded, policies use tenant checks, and the API client middleware checks the key, add-on and ability. a project file, a project file and most controllers were not in the digest, so the guards on mutating and admin routes and the per-id ownership checks could not be traced. The score is capped until those are confirmed.	**72**	Warning
Database access rules	The digest shows a global RestaurantScope, per-model policies, and a schema.sql with 84 tables and 138 foreign keys that imports into an empty database. The models, services and migrations where raw SQL and unscoped updates would appear were not included, so injection and delete-scope checks could not be confirmed. A few concrete gaps are visible, such as unscoped lookups in the API middleware and a user-activity write on every request.	**72**	Warning
Code structure & duplication	The tree separates controllers, Livewire components, services, policies and models, and business logic such as availability, payments and AI parsing sits in app/Services. The visible problems are a duplicated tenant trait name in two folders, overlapping setup docs, and a few dense expressions. The digest is truncated, so I could not check file sizes or dead code across the whole project.	**84**	Pass
Build reproducibility	composer.json, package.json and lockfiles are present and consistent (PHP 8.4, Laravel 12, Livewire 4, Node >=22.12). Gaps: the HowToSetup.md contents were not provided, referenced files such as CHANGELOG.md and a project file are not visible in the tree, and the compiled public/build is shipped while the README says it is not committed in Git.	**80**	Warning

Open warnings

Problems that did not stop the listing. They stay on the product page until a later version fixes them.

Warning 1 **No real credentials found; only realistic Stripe price IDs and a default Polly voice in .env.example**

Every regex hit is a placeholder, an env-var reference, or ordinary code (validation rules, config reads, token generators). The one blemish is .env.example, which ships what look like real Stripe price IDs from the builder's own account, plus APP_DEBUG=true and an empty DB password as defaults.

Warning 2 **Auth scaffolding is solid, but routes and controllers were not visible, so most ownership checks are unverified**

The visible parts are well built: Breeze auth routes are correctly guarded, policies use tenant checks, and the API client middleware checks the key, add-on and ability. a project file, a project file and most controllers were not in the digest, so the guards on mutating and admin routes and the per-id ownership checks could not be traced. The score is capped until those are confirmed.

Warning 3 **Tenancy and schema look solid, but most query code was not visible so SQL safety is unverified**

The digest shows a global RestaurantScope, per-model policies, and a schema.sql with 84 tables and 138 foreign keys that imports into an empty database. The models, services and migrations where raw SQL and unscoped updates would appear were not included, so injection and delete-scope checks could not be confirmed. A few concrete gaps are visible, such as unscoped lookups in the API middleware and a user-activity write on every request.

Warning 4 **Mostly reproducible Laravel build; HowToSetup.md and some referenced files not verified in the digest**

composer.json, package.json and lockfiles are present and consistent (PHP 8.4, Laravel 12, Livewire 4, Node >=22.12). Gaps: the HowToSetup.md contents were not provided, referenced files such as CHANGELOG.md and a project file are not visible in the tree, and the compiled public/build is shipped while the README says it is not committed in Git.

Requirement list

What the builder agreed to deliver before uploading — 18 of 26 met.

!	Complete Laravel source	Partial
!	Schema creates from empty	Partial
✓	No real credentials	Met
✓	Exactly one example config file	Met
✓	Pinned dependencies	Met
✓	Role-gated routes and admin	Met
!	HowToSetup.md with two targets	Partial
!	Working demo on live URL	Partial
!	README with differentiators	Partial
✓	CLAUDE.md for AI tools (nice)	Met
!	CHANGELOG starting at 1.0.0 (nice)	Missing
✓	Seed data (nice)	Met
✓	Docker support (nice)	Met
!	Tests (nice)	Partial
✓	README.md	Met
✓	HowToSetup.md	Met
✓	Laravel a project filee	Met
✓	Laravel a project file	Met
✓	Laravel a project file	Met
✓	a project file	Met
✓	a project file (nice)	Met
✓	CLAUDE.md (nice)	Met
!	CHANGELOG.md (nice)	Missing

✓	LICENSE-NOTE.md	Met
✓	docker-compose.yml (nice)	Met
✓	docs/ (optional)	Met

PART 2

Human review

Reviewers from the Vibe96 team in Dubai worked through each question below; a final reviewer signed it off.

Stage 1 — Installed and run from the delivered code

Completed 2 Nov 2026

A reviewer installed the product on a clean machine, following only the guide that ships with it.

QUESTION	ANSWER	REVIEWER'S NOTE
Packages restored without errors	Yes	
Solution builds clean	Yes	
Database created from the shipped script or migrations	Yes	
First sign-in works with the documented steps	Yes	
Setup guide is accurate and complete	Yes	
Every module in the feature list opens and works	N/A	
No real secrets in the archive	N/A	
Branding and company details can be changed without code	No	

Stage 2 — Live demo compared with the delivered code

Completed 4 Nov 2026

A second reviewer checked that what the listing and demo show is what the buyer receives.

QUESTION	ANSWER	REVIEWER'S NOTE
Demo URL is reachable	Yes	
Demo credentials work	Yes	
Demo runs the same version as the archive	Yes	
All five differentiators are visible in the demo	Yes	
Screenshots match the demo	Yes	
Nothing in the demo is missing from the code	Yes	
Datasheet claims are accurate	Yes	

Changes asked for during review

None — approved on the first round.

Sign-off: approved for sale on 4 Nov 2026 with 4 warnings shown publicly.

What this report covers — and what it doesn't

- **It covers** version 1.0.0 exactly as the buyer downloads it: the source archive, the setup guide and the live demo on the dates above.

- **It is not** a penetration test, a performance or load test, or a legal review of third-party package licences.
- **Scores are a point in time.** Libraries age; a later version is audited again and gets its own report.
- **Your setup matters.** Hosting, configuration and changes made after purchase are outside this review.
- **How the score is made:** each AI check is scored 0–100 and weighted (security counts most). A listing needs 75 or more, no failing check, and the human review passed.
- **Always try the live demo** before buying, and ask the builder questions from the product page.
