

VIBE96 QUALITY REPORT

Dependable-clean

Full-stack cleaning business platform with customer booking, staff dispatch and role-based dashboards

Product ID	**B0446-53515**
Builder	**Nishat Raihana Prantik**
Version reviewed	**1.8.2 · released 11 Nov 2026**
Stack	**Next.js 16.2 + React 19.3 (frontend), Express 5.1 (backend) · JavaScript (Node.js 20.13+) · MongoDB 6.20+**
Built with	**OpenAI Codex, Claude Code, GitHub Copilot**
Review period	**9 Nov 2026 – 11 Nov 2026**

86 / 100

Passed with 2 warnings

Pass mark 75 and no failing check.

Scores

Security	88
Code structure	84
Docs & completeness	100
Dependency health	88
Build & deploy	80

✓ **AI code audit**
6 checks · 9 Nov 2026

✓ **Installed & run**
11 Nov 2026

✓ **Demo vs delivered**
11 Nov 2026

✓ **Final sign-off**
11 Nov 2026

At a glance

- ✓ Installed and run from the delivered code — 8 of 8 checks answered yes.
- ✓ Live demo compared with the delivered code — 7 of 7 checks answered yes.
- ✓ 15 of 15 promised items delivered (setup guide, example config and the rest).
- ✓ Security scored 88/100 with no failing check.
- ! 2 open warnings — explained in part 1.

Check this report is genuine. Scan the code or open vibe96.com/report/QR-26-00118. The online copy always shows the latest status.

PART 1

AI code audit

The full source archive was read by our AI auditor against each check. It reads the code — it does not run it; running it is part 2.

CHECK	WHAT WE FOUND	SCORE	RESULT
Secrets & credentials	Every regex candidate is a variable name, a hashing call, or a test fixture, not a committed credential. a project filee uses placeholders and an empty AUTH_SECRET, and the production config refuses weak secrets. Only the visible digest was reviewed, so files omitted from it could not be checked.	**95**	Pass
Dependency vulnerabilities	Every dependency in the three manifests is pinned to an exact version with no wildcards or pre-release tags, and a single root package-lock.json is used for the npm workspace. The lockfile contents were not included in the digest, so the installed versions and advisories could not be verified. A few declared stack versions differ from the pinned ones, which is a minor documentation inconsistency.	**88**	Pass
Authorisation & access control	Every visible write route uses a role guard or the rate limiter, lookups by id are scoped in the database query, and passwords use salted scrypt with revocable tokens. The digest cut off teams, reviews, services and support routes, so those could not be verified, and a few low-risk gaps remain.	**88**	Pass
Database access rules	The MongoDB access visible in the digest is well scoped: operator keys are rejected, booking lookups put owner/assignee in the filter, and migrations add indexes and validators. Weaknesses are full-collection reads filtered in JavaScript and read-all endpoints. The digest was truncated, so team.js, reviews.js, support.js, services.js and the migrations were not seen.	**80**	Warning
Code structure & duplication	The backend is split into one router per domain area with shared middleware, auth and validation modules, and the README and AGENTS notes describe the layout accurately. Weaknesses are some dense single-line handlers and repeated shape checks (e.g. signup/login/setup password handling, team-member and location lookups scanning full collections), plus hard-coded business values such as the 3-day lead time and the 15-minute rate-limit window that are only partly configurable.	**84**	Pass
Build reproducibility	Workspaces, a single root lockfile, pinned versions, .nvmrc and per-package build scripts make a clean restore and build plausible. The declared stack (Next 16.2, Express 5.1, MongoDB 6.20+) differs from the pinned versions (Next 16.4.5, Express 5.2.1, driver 6.21.0), and HowToSetup.md was not in the digest, so its step order could not be verified.	**80**	Warning

Open warnings

Problems that did not stop the listing. They stay on the product page until a later version fixes them.

Warning 1 **No injection or unscoped destructive queries seen; some scans in-memory, partial review only**

The MongoDB access visible in the digest is well scoped: operator keys are rejected, booking lookups put owner/assignee in the filter, and migrations add indexes and validators. Weaknesses are full-collection reads filtered in JavaScript and read-all endpoints. The digest was truncated, so team.js, reviews.js, support.js, services.js and the migrations were not seen.

Warning 2 **Build mostly reproducible; HowToSetup.md unseen and version claims conflict with declared stack**

Workspaces, a single root lockfile, pinned versions, .nvmrc and per-package build scripts make a clean restore and build plausible. The declared stack (Next 16.2, Express 5.1, MongoDB 6.20+) differs from the pinned versions (Next 16.4.5, Express 5.2.1, driver 6.21.0), and HowToSetup.md was not in the digest, so its step order could not be verified.

Requirement list

What the builder agreed to deliver before uploading — 15 of 15 met.

✓	Complete source for every component	Met
✓	No real credentials in the archive	Met
✓	Builds from a clean machine	Met
✓	Database script or migrations	Met
✓	Authentication and roles on every mutating endpoint	Met
✓	Pinned dependencies without critical CVEs (nice)	Met
✓	Documentation set (nice)	Met
✓	Working live demo	Met
✓	README.md	Met
✓	HowToSetup.md	Met
✓	CLAUDE.md (or AGENTS.md) (nice)	Met
✓	CHANGELOG.md (nice)	Met
✓	.env.example	Met
✓	a project file	Met
✓	a project file (nice)	Met

PART 2

Human review

Reviewers from the Vibe96 team in Dubai worked through each question below; a final reviewer signed it off.

Stage 1 — Installed and run from the delivered code

Completed 11 Nov 2026

A reviewer installed the product on a clean machine, following only the guide that ships with it.

QUESTION	ANSWER	REVIEWER'S NOTE
Packages restored without errors	Yes	
Solution builds clean	Yes	
Database created from the shipped script or migrations	Yes	
First sign-in works with the documented steps	Yes	
Setup guide is accurate and complete	Yes	
Every module in the feature list opens and works	Yes	
No real secrets in the archive	Yes	
Branding and company details can be changed without code	Yes	

Stage 2 — Live demo compared with the delivered code

Completed 11 Nov 2026

A second reviewer checked that what the listing and demo show is what the buyer receives.

QUESTION	ANSWER	REVIEWER'S NOTE
Demo URL is reachable	Yes	
Demo credentials work	Yes	
Demo runs the same version as the archive	Yes	
All five differentiators are visible in the demo	Yes	
Screenshots match the demo	Yes	
Nothing in the demo is missing from the code	Yes	
Datasheet claims are accurate	Yes	

Changes asked for during review

None — approved on the first round.

Sign-off: approved for sale on 11 Nov 2026 with 2 warnings shown publicly.

What this report covers — and what it doesn't

- **It covers** version 1.8.2 exactly as the buyer downloads it: the source archive, the setup guide and the live demo on the dates above.

- **It is not** a penetration test, a performance or load test, or a legal review of third-party package licences.
- **Scores are a point in time.** Libraries age; a later version is audited again and gets its own report.
- **Your setup matters.** Hosting, configuration and changes made after purchase are outside this review.
- **How the score is made:** each AI check is scored 0–100 and weighted (security counts most). A listing needs 75 or more, no failing check, and the human review passed.
- **Always try the live demo** before buying, and ask the builder questions from the product page.

Report history

REPORT	VERSION	DATE	SCORE	STATUS
QR-26-00118	1.8.2	11 Nov 2026	**86**	Current
