

VIBE96 QUALITY REPORT

Rently Marketplace

Peer-to-peer and operator-owned rental marketplace with customer, member and admin portals on .NET 10 and SQL Server.

Product ID	**B0004-11361**
Builder	**CodeHarbor**
Version reviewed	**1.0.0 · released 12 Nov 2026**
Stack	**ASP.NET Core 10 MVC (server-rendered Razor, no SPA) · C# on .NET 10 · Microsoft SQL Server 2019+ (ADO.NET, parameterised SQL, no EF)**
Built with	**Claude Code**
Review period	**12 Nov 2026 – 12 Nov 2026**

79 / 100

Passed with 4 warnings

Pass mark 75 and no failing check.

Scores

Security	77
Code structure	78
Docs & completeness	83
Dependency health	82
Build & deploy	84

✓ **AI code audit**
6 checks · 11 Nov 2026

✓ **Installed & run**
12 Nov 2026

✓ **Demo vs delivered**
12 Nov 2026

✓ **Final sign-off**
12 Nov 2026

At a glance

✓ Installed and run from the delivered code — 8 of 8 checks answered yes.

✓ Live demo compared with the delivered code — 7 of 7 checks answered yes.

! 20 of 24 promised items delivered (setup guide, example config and the rest).

✓ Security scored 77/100 with no failing check.

! 4 open warnings — explained in part 1.

Check this report is genuine. Scan the code or open vibe96.com/report/QR-26-00127. The online copy always shows the latest status.

PART 1

AI code audit

The full source archive was read by our AI auditor against each check. It reads the code — it does not run it; running it is part 2.

CHECK	WHAT WE FOUND	SCORE	RESULT
Secrets & credentials	No live API keys, private keys or real connection strings were found. appsettings.json uses Trusted_Connection with no password, and Stripe/SMTP/SMS secrets are stored encrypted via the admin portal. The docker-compose file ships predictable fallback SA and app passwords, and the demo account password is documented publicly.	88	Warning
Dependency vulnerabilities	The project uses NuGet central package management (Directory.Packages.props) with lockfiles enabled and locked-mode restore, and the README states a clean NuGet audit on 11 Nov 2026. The digest does not include the actual package versions or lockfile contents, so I cannot independently verify there are no vulnerable or pre-release packages. The demo page loads React from unpkg, which is an unpinned-looking external dependency worth checking.	82	Pass
Authorisation & access control	The visible code uses bcrypt (work factor 12), server-side session validation, separate staff and user cookies, rate-limited login, and a safe returnUrl check. Only the admin AuthController and the shared middleware were visible. The 20+ admin controllers, member/customer controllers and the webhook were not shown, so guards and ownership checks on id lookups cannot be confirmed.	72	Warning
Database access rules	The visible SQL uses parameters (e.g. the login-attempt insert and the failed-login update), and CLAUDE.md states ListQuery allow-lists columns. The one string-interpolated statement only injects a table name chosen from a boolean. The schema.sql, seed.sql, Db.cs and ListQuery.cs were not in the digest, so foreign keys, indexes, cascade rules and ownership scoping could not be verified.	72	Warning
Code structure & duplication	The project follows a clear module layout (Areas per portal, Services, Security, Infrastructure), which a buyer can navigate. However, the digest shows many 'Support' partial files and large controllers that mix concerns, and some configuration and demo values are hard-coded rather than set in configuration.	78	Warning
Build reproducibility	The tree has a solution file, central package management, lock files, global.json, Dockerfile and compose, and the docs describe the steps coherently. HowToSetup.md, Dockerfile, csproj and Directory.Packages.props contents were not provided, so prerequisite ordering and version consistency could not be fully verified. Minor risks exist around the committed lock file and the tests folder.	84	Pass

Open warnings

Problems that did not stop the listing. They stay on the product page until a later version fixes them.

Warning 1 **No real credentials found; weak default DB passwords and published demo password ship to buyers**

No live API keys, private keys or real connection strings were found. appsettings.json uses Trusted_Connection with no password, and Stripe/SMTP/SMS secrets are stored encrypted via the admin portal. The docker-compose file ships predictable fallback SA and app passwords, and the demo account password is documented publicly.

Warning 2 **Well-organised MVC layout, but several god-sized files and repeated controller helpers weigh the score down**

The project follows a clear module layout (Areas per portal, Services, Security, Infrastructure), which a buyer can navigate. However, the digest shows many 'Support' partial files and large controllers that mix concerns, and some configuration and demo values are hard-coded rather than set in configuration.

Warning 3 **Parameterised ADO.NET throughout; schema and per-user scoping not verifiable from the digest**

The visible SQL uses parameters (e.g. the login-attempt insert and the failed-login update), and CLAUDE.md states ListQuery allow-lists columns. The one string-interpolated statement only injects a table name chosen from a boolean. The schema.sql, seed.sql, Db.cs and ListQuery.cs were not in the digest, so foreign keys, indexes, cascade rules and ownership scoping could not be verified.

Warning 4 **Auth design looks solid, but most of 328 endpoints could not be traced; a few concrete gaps found**

The visible code uses bcrypt (work factor 12), server-side session validation, separate staff and user cookies, rate-limited login, and a safe returnUrl check. Only the admin AuthController and the shared middleware were visible. The 20+ admin controllers, member/customer controllers and the webhook were not shown, so guards and ownership checks on id lookups cannot be confirmed.

Requirement list

What the builder agreed to deliver before uploading — 20 of 24 met.

✓	Complete source for both portals	Met
✓	No real credentials	Met
!	One example config file	Partial
✓	Database schema creates from empty	Met
✓	Pinned dependencies with lockfile	Met
!	HowToSetup.md for two targets	Partial
!	Role-gated admin and ownership checks	Partial
!	Reachable demo with sample data	Partial
✓	The five differentiating features exist (nice)	Met
✓	CLAUDE.md for AI tools (nice)	Met
✓	Seed data and docker-compose (nice)	Met
✓	Keep files small and layered (nice)	Met
✓	Optional documentation (optional)	Met
✓	README.md	Met
✓	HowToSetup.md	Met
✓	NET a project file	Met
✓	NET a project file	Met
✓	a project file	Met
✓	CLAUDE.md (nice)	Met
✓	CHANGELOG.md (nice)	Met
✓	a project file (nice)	Met
✓	docker-compose.yml (nice)	Met
✓	LICENSE-NOTE.md	Met
✓	docs/ (optional)	Met

PART 2

Human review

Reviewers from the Vibe96 team in Dubai worked through each question below; a final reviewer signed it off.

Stage 1 — Installed and run from the delivered code

Completed 12 Nov 2026

A reviewer installed the product on a clean machine, following only the guide that ships with it.

QUESTION	ANSWER	REVIEWER'S NOTE
Packages restored without errors	Yes	
Solution builds clean	Yes	
Database created from the shipped script or migrations	Yes	
First sign-in works with the documented steps	Yes	
Setup guide is accurate and complete	Yes	
Every module in the feature list opens and works	Yes	
No real secrets in the archive	Yes	
Branding and company details can be changed without code	Yes	

Stage 2 — Live demo compared with the delivered code

Completed 12 Nov 2026

A second reviewer checked that what the listing and demo show is what the buyer receives.

QUESTION	ANSWER	REVIEWER'S NOTE
Demo URL is reachable	Yes	
Demo credentials work	Yes	
Demo runs the same version as the archive	Yes	
All five differentiators are visible in the demo	Yes	
Screenshots match the demo	Yes	
Nothing in the demo is missing from the code	Yes	
Datasheet claims are accurate	Yes	

Changes asked for during review

None — approved on the first round.

Sign-off: approved for sale on 12 Nov 2026 with 4 warnings shown publicly.

What this report covers — and what it doesn't

- **It covers** version 1.0.0 exactly as the buyer downloads it: the source archive, the setup guide and the live demo on the dates above.

- **It is not** a penetration test, a performance or load test, or a legal review of third-party package licences.
- **Scores are a point in time.** Libraries age; a later version is audited again and gets its own report.
- **Your setup matters.** Hosting, configuration and changes made after purchase are outside this review.
- **How the score is made:** each AI check is scored 0–100 and weighted (security counts most). A listing needs 75 or more, no failing check, and the human review passed.
- **Always try the live demo** before buying, and ask the builder questions from the product page.
