At a glance

! Installed and run from the delivered code — 7 of 8 checks answered yes.

✓ Live demo compared with the delivered code — 7 of 7 checks answered yes.

! 8 of 15 promised items delivered (setup guide, example config and the rest).

✓ Security scored 83/100 with no failing check.

! 4 open warnings — explained in part 1.

Check this report is genuine. Scan the code or open vibe96.com/report/QR-26-00138. The online copy always shows the latest status.

PART 1

AI code audit

The full source archive was read by our AI auditor against each check. It reads the code — it does not run it; running it is part 2.

CHECK	WHAT WE FOUND	SCORE	RESULT
Secrets & credentials	Every regex candidate was reviewed and none is a real secret. They are runtime generation of passwords and tokens, encryption calls, variable names and test fixtures, and .env.example ships DB_PASSWORD and ADMIN_PASSWORD empty. One minor note: the live demo's XSRF-TOKEN cookie is a normal encrypted Laravel cookie, not a leaked secret.	96	Pass
Dependency vulnerabilities	The only manifest visible is composer.json. It uses caret ranges on Laravel 13.37 and a few other packages, with all dev tooling in require-dev, and nothing is wildcard or pre-release. composer.lock is omitted from the digest, so installed versions cannot be verified. The repo ships a composer-audit workflow and a project file, which suggests the lock exists, but this was not confirmed.	72	Warning
Authorisation & access control	The submitted docs and middleware show 172 of 181 mutating routes with auth plus role checks, hashed API tokens, a throttled login, and a demo-login gate that is off by default. The route files and most controllers were not in the digest, so the claims could not be verified line by line. A few residual risks remain around demo login, API token lookups, signed file URLs, and a few mutating routes without role middleware.	80	Warning
Database access rules	The excerpts show no string-built SQL and no unscoped destructive statements. Token authentication loads every active token into memory and hashes each one in a loop. The schema, migrations, models and most controllers were not in the digest, so foreign keys, indexes and N+1 hot paths cannot be verified.	74	Warning
Code structure & duplication	The digest shows a conventional Laravel structure: controllers grouped by domain (Accounts, Dashboards, Reports, System), services for posting and payroll, and per-module Blade folders. The main maintainability costs are a large number of controllers and views that likely repeat CRUD scaffolding, plus route and role maps that are hand-maintained in several places.	84	Pass
Build reproducibility	composer.json is coherent (PHP ^8.3, Laravel ^13.37, extensions declared) and the setup script orders steps sensibly. However, HowToSetup.md is referenced but not shown, the setup script never creates the MySQL database or user, and README/docs counts and platform pins are inconsistent.	72	Warning

Open warnings

Problems that did not stop the listing. They stay on the product page until a later version fixes them.

Warning 1 composer.json is sound, but composer.lock and package manifests could not be inspected; no known critical CVE

The only manifest visible is composer.json. It uses caret ranges on Laravel 13.37 and a few other packages, with all dev tooling in require-dev, and nothing is wildcard or pre-release. composer.lock is omitted from the digest, so installed versions cannot be verified. The repo ships a composer-audit workflow and a project file, which suggests the lock exists, but this was not confirmed.

Warning 2 No injection or unscoped deletes visible, but token lookup loads all rows and most DB code was not reviewed

The excerpts show no string-built SQL and no unscoped destructive statements. Token authentication loads every active token into memory and hashes each one in a loop. The schema, migrations, models and most controllers were not in the digest, so foreign keys, indexes and N+1 hot paths cannot be verified.

Warning 3 **Strong route auth and role design, but routes unseen and a few residual gaps (demo login, id ownership, files)**

The submitted docs and middleware show 172 of 181 mutating routes with auth plus role checks, hashed API tokens, a throttled login, and a demo-login gate that is off by default. The route files and most controllers were not in the digest, so the claims could not be verified line by line. A few residual risks remain around demo login, API token lookups, signed file URLs, and a few mutating routes without role middleware.

Warning 4 **Mostly reproducible Laravel build; HowToSetup.md unverified and setup docs/prerequisites have gaps**

composer.json is coherent (PHP ^8.3, Laravel ^13.37, extensions declared) and the setup script orders steps sensibly. However, HowToSetup.md is referenced but not shown, the setup script never creates the MySQL database or user, and README/docs counts and platform pins are inconsistent.

Requirement list

What the builder agreed to deliver before uploading — 8 of 15 met.

!	Complete source for every component	Partial
✓	No real credentials in the archive	Met
!	Builds from a clean machine	Partial
✓	Database script or migrations	Met
!	Authentication and roles on every mutating endpoint	Partial
!	Pinned dependencies without critical CVEs (nice)	Partial
!	Documentation set (nice)	Partial
!	Working live demo	Partial
✓	README.md	Met
✓	HowToSetup.md	Met
!	CLAUDE.md (or AGENTS.md) (nice)	Missing
✓	CHANGELOG.md (nice)	Met
✓	.env.example	Met
✓	a project file	Met
✓	a project file (nice)	Met

PART 2

Human review

Reviewers from the Vibe96 team in Dubai worked through each question below; a final reviewer signed it off.

Stage 1 — Installed and run from the delivered code

Completed 16 Nov 2026

A reviewer installed the product on a clean machine, following only the guide that ships with it.

QUESTION	ANSWER	REVIEWER'S NOTE
Packages restored without errors	Yes	
Solution builds clean	Yes	
Database created from the shipped script or migrations	Yes	
First sign-in works with the documented steps	Yes	
Setup guide is accurate and complete	Yes	
Every module in the feature list opens and works	Yes	
No real secrets in the archive	Yes	
Branding and company details can be changed without code	No	

Stage 2 — Live demo compared with the delivered code

Completed 16 Nov 2026

A second reviewer checked that what the listing and demo show is what the buyer receives.

QUESTION	ANSWER	REVIEWER'S NOTE
Demo URL is reachable	Yes	
Demo credentials work	Yes	
Demo runs the same version as the archive	Yes	
All five differentiators are visible in the demo	Yes	
Screenshots match the demo	Yes	
Nothing in the demo is missing from the code	Yes	
Datasheet claims are accurate	Yes	

Changes asked for during review

None — approved on the first round.

Sign-off: approved for sale on 16 Nov 2026 with 4 warnings shown publicly.

What this report covers — and what it doesn't

- **It covers** version 1.20.2 exactly as the buyer downloads it: the source archive, the setup guide and the live demo on the dates above.

- **It is not** a penetration test, a performance or load test, or a legal review of third-party package licences.
- **Scores are a point in time.** Libraries age; a later version is audited again and gets its own report.
- **Your setup matters.** Hosting, configuration and changes made after purchase are outside this review.
- **How the score is made:** each AI check is scored 0–100 and weighted (security counts most). A listing needs 75 or more, no failing check, and the human review passed.
- **Always try the live demo** before buying, and ask the builder questions from the product page.
